## 2. Per-Concern Decisions

### auth
| Question (S5)        | Answer                        | Feature | Date       |
|----------------------|-------------------------------|---------|------------|
| Auth method?         | Server-side sessions + Redis | F003    | 2026-03-25 |
| Token expiry?        | 1h, sliding window renewal   | F003    | 2026-03-25 |
| Authorization model? | RBAC (admin/member/viewer)   | F003    | 2026-03-25 |
| Concurrent sessions? | 1 per device, new login      | F003    | 2026-03-25 |
|                      | expires previous              |         |            |

### token-budget
| Question (S5)        | Answer                        | Feature | Date       |
|----------------------|-------------------------------|---------|------------|
| Budget unit?         | Org monthly + User daily     | F004    | 2026-03-25 |
| Over-limit behavior? | 429 response + dashboard     | F004    | 2026-03-25 |
|                      | alert                         |         |            |
| Reset policy?        | Monthly auto-reset, no       | F004    | 2026-03-25 |
|                      | carry-over                    |         |            |

entity-registry.mdapi-registry.mdsdd-state.mddomain-profile-instance.md

```
F001 (Auth):
  specify -> entity-registry += User{id, email, displayName, role}
  specify -> api-registry += POST /api/auth/login {...}
  implement -> code written

F002 (Task CRUD):
  specify -> reads entity-registry -> sees User entity
```

```
  specify -> SC: "task.owner references User.id" (not a new User)
  specify -> api-registry += GET /api/tasks {...}
  implement -> imports User type from F001

F003 (Dashboard):
  specify -> reads both registries
  specify -> SC: "dashboard displays User.displayName"
  specify -> SC: "dashboard lists tasks via GET /api/tasks"
  plan -> Integration Contract: consumes User from F001, Tasks from F002
  implement -> references both existing APIs
  verify -> Phase 4 (cross-Feature): dashboard + auth + tasks together
```

User.orgId

```
## User
- Owner: F003-auth-multi-tenancy
- Fields:
  - id: string (UUID)
  - email: string (unique)
  - role: enum (admin | member | viewer)
  - orgId: string (FK -> Organization)
  - passwordHash: string
- Used by: F003, F004-token-budget, F005-prompt-guard
- Notes: F004 reads User.orgId for budget lookup

## Organization
- Owner: F003-auth-multi-tenancy
- Fields:
  - id: string (UUID)
  - name: string
  - plan: enum (free | pro | enterprise)
  - monthlyTokenBudget: number
  - usedTokens: number
- Used by: F003, F004
```

```
## POST /auth/login
- Provider: F003-auth-multi-tenancy
- Request: { email: string, password: string }
- Response 200: { sessionId: string, user: User }
- Response 401: { error: "INVALID_CREDENTIALS" }
- Auth: None (public endpoint)
- Consumers: F002-llm-gateway (post-login redirect)

## POST /v1/chat/completions
- Provider: F002-llm-gateway
- Request: { model: string, messages: [], stream: boolean }
- Response 200 (stream): SSE events { delta, done }
- Response 429: { error: "TOKEN_LIMIT_EXCEEDED" }
- Auth: Bearer session token
- Consumers: Frontend
```

```
- Notes: F004 added 429 response; F005 adds input filtering
```

# 4. Add more Features
/smart-sdd add "multi-provider chat with streaming"
/smart-sdd pipeline F002
# F002 automatically sees F001's entities and APIs
```

verify-report.md

```
Have existing code?
  No  -> /smart-sdd init -> add -> pipeline        (New Project)
  Yes -> What is your goal?
         Understand only    -> /code-explore          (Explore)
         Document only      -> /smart-sdd adopt       (Adoption)
         Add features       -> adopt -> add -> pipeline (Extend)
         Rebuild (same stack) -> /reverse-spec -> pipeline (Rebuild)
         Rebuild (new stack)  -> /reverse-spec --stack new (Migrate)

Need custom domain modules?
  -> /domain-extend detect -> extend
```

/smart-sdd add → pipeline

Read targets:
  1. specs/_global/entity-registry.md
  2. specs/_global/api-registry.md
  3. specs/{FID}/pre-context.md
  4. specs/{FID}/spec-draft.md (rebuild only)
  5. .specify/memory/constitution.md

Domain sections loaded: S0, S1, S5, S9, A2, A3, A5
Sections discarded: S2, S3, S4, S6, S7, S8, F0-F9

Injected content:
  - Brief-to-SC mapping instructions
  - SC numbering convention
  - Measurability criteria from S1
  - Cross-concern emergent rules (from Step 3.5)
  - Scale-adjusted SC depth

Checkpoint display:
  - Feature name and ID
  - Loaded domain modules with section counts
  - Entity/API registry summary (N entities, M endpoints)
  - Pre-context summary (key requirements)

Review display:
  - Generated FRs with SC counts
  - SC measurability assessment
  - Brief-to-SC coverage (every Brief item -> at least 1 SC)
  - Entity references (new vs existing)
  - AskUserQuestion: Approve / Request modifications
```

```
Read targets:
  1. specs/{FID}/spec.md
  2. specs/_global/entity-registry.md
  3. specs/_global/api-registry.md
  4. specs/{FID}/pre-context.md (for source component mapping)
```

```
Domain sections loaded: S7 (B-1 only), F2, F3
Sections discarded: S0, S1, S2, S3, S4, S5, S6, S8, S9

Injected content:
  - Bug prevention from S7 (B-1 plan-relevant subset)
  - Foundation checklist items from F2
  - T0 Feature grouping rules from F3
  - Source Component Mapping instructions (rebuild only)
  - Integration Contract template

Review display:
  - Architecture summary (components, data flow)
  - API contracts
  - Integration Contracts (if cross-Feature dependencies)
  - Source Component Mapping (rebuild only, BLOCKING)
  - AskUserQuestion: Approve / Request modifications
```

```
Read targets:
  1. specs/{FID}/tasks.md
  2. specs/{FID}/plan.md
  3. specs/{FID}/pre-context.md (BLOCKING for rebuild)
  4. Preceding Features' interaction-surfaces.md

Domain sections loaded: S7 (B-3 subset), S6, F8
Sections discarded: S0, S1, S2, S3, S4, S5, S8, S9

Injected content:
  - Per-task bug prevention anti-patterns from S7
  - UI testing integration from S6 (when gui interface active)
  - Toolchain commands from F8
  - Source Reference Injection (BLOCKING for rebuild+GUI)
  - Visual Reference Checkpoint (BLOCKING for first UI task)
  - Interaction Surface Preservation (read inventory before
    modifying shared components)

Post-step update:
  - New entities -> entity-registry.md
  - New API endpoints -> api-registry.md
  - Interaction surfaces -> specs/{FID}/interaction-surfaces.md
```

```
Read targets:
  1. specs/{FID}/spec.md (for SC list)
  2. specs/{FID}/plan.md (for Integration Contracts)
  3. verify-phases.md (Phase 0-4 protocol)
  4. sdd-state.md verify_progress (for resume)

Domain sections loaded: S1, S3, S7 (B-4), S8, F8
Sections discarded: S0, S2, S4, S5, S6, S9, F9
```

```
Injected content:
  - SC verification checklist from S1
  - Additional verify steps from S3
  - Runtime verification strategy from S8
  - Bug regression patterns from S7
  - Toolchain commands from F8

Phase structure:
  Phase 0: Playwright preflight
  Phase 1: Build + typecheck + lint (F8 commands)
  Phase 2: Automated tests
  Phase 3: UI/Runtime verification (S8 strategy)
    3a: Launch application
    3b: SC-by-SC verification against running UI
    3c: Regression checks (previous Features still work)
    3d: Source app comparison (rebuild only, Guard 7)
    3e: User-assisted verification (if Playwright unavailable)
    3f: SC Evidence Gate (all SCs must have evidence)
  Phase 4: Cross-Feature integration (Guard 6)
```
